MAPA[®]

PROFESSIONAL

MAPA PROFESSIONAL introduces its

Corporate Social Responsibility initiative "Our Caring Actions"

Our long-term perspective centres around a process of continuous improvement to develop more responsible sourcing, mitigate our environmental impact and improve social standards with concrete actions and specific goals set within 2025. We are striving to meet our stakeholders' expectations whilst working towards a greener future in which we play an active role in terms of sustainability as we firmly believe that all our efforts, our caring actions for you, for us, no matter how big or small, once combined and multiplied, will have a positive impact.

TIME-HONOURED EXPERTISE AND KNOW-HOW

- An industrial expertise in gloves manufacturing since 1957
- Materials and products are traced and controlled to be compliant with our quality policy
- 100% of our factories certified ISO 9001 (quality management)

PRODUCT PERFORMANCE THAT GOES BEYOND THE STANDARDS

- Exclusive tests on products beyond the PPE standards for:
 - ⊕ performance
 - ⊕ innocuousness
 - ⊕ comfort
 - ⊕ durability
- Some products are OEKO TEX certified, DMF-free or undergo dermatological tests

A REAL COMMAND OF JOB-RELATED RISKS

- In-depth workstations analyses at workplaces to identify users' needs
- Tailor-made recommendations

TO BE CONTINUALLY INNOVATING

- 30 R&D experts to take our innovations further still
- Tests conducted on our own laboratories in real conditions
- Innovation every year

2025 GOALS

Develop a decision support solution for our users to offer them better protection and efficiency

PROTECTING THE PEOPLE WHO MANUFACTURE OUR GLOVES

- Safe and ergonomic workplaces: 100% of employees are equipped with appropriate PPE and are trained in safety issues
- Strict ethics policy (human rights and anti-corruption)
- Our factories are certified ISO 45001
- BSCI or SEDEX audits carried out in our factories each year
- All our subcontractors are committed to our code of conduct, and all those in high-risk areas are audited annually

ENSURING A CARING CORPORATE CULTURE

- Our objective is to create best working conditions for our employees
- Active social policy that goes beyond legal requirements
- Working actively to maintain professional equity within all our employees

GETTING INVOLVED LOCALLY

- Relationship of dialogue with the local authorities and communities in the countries in which we operate
- Raw materials and packaging sourced close to our factories
- A culture of caring, listening and solidarity: all mobilised in local actions

2025 GOALS

Train 100% of our employees in CSR matters

Reduce our work-related incident rate by 40% in 5 years (from 2020)

A REDUCED ENVIRONMENTAL FOOTPRINT

- Selection of the most responsible raw materials possible
- Close environmental footprint monitoring of our factories certified ISO 14001
- Reduction of our transport-related Greenhouse Gas emissions by 5% (Fret 21 programme)

AN ECO-DESIGN INITIATIVE

- Life Cycle Analyses carried out to identify where our main environmental impacts lay
- 50% of mechanical gloves are washable for:
 - ⊕ extended use
 - ⊕ waste reduction
- 100% of packaging is recyclable
- Optipack programme: plastic savings thanks to reduced packagings (-22 tonnes in 2020)

2025 GOALS

Look for more sustainable raw materials for each new development

Reduce the environmental footprint of our factories (participation in Newell targets from 2016 to 2025)

-20% in water use

-90% in waste sent to landfill

-25% in energy consumption

-30% in greenhouse gas emissions

Continue to reduce our plastic packaging

Extend products' lifespan by targeting

100% of cut-resistant gloves washable

Investigate on improved product's end-of-life (recycling and donation)

A SOLUTION FOR EVERY HAND THAT WORKS

Mapa Professional is committed to offering companies **innovative solutions** for protecting the hands which meet users' needs.

Our brand is involved in **the health and safety** of users at their workplace.

Our offer meets requirements for **comfort and protection** for most risks in the professional environment.

PROTECTION OF THE HAND MAPA PROFESSIONAL BEYOND THE GLOVE

We have a team dedicated to understanding our users' needs and to designing solutions suitable for use at workstations for most industries.

1 Customer Engineering Department
stc.mapaspontex@newellco.com

2 R&D centres
(30 engineers and technicians)

Integrated production
(3 factories worldwide)

1 Application laboratory
With tests exclusive to MAPA Professional which reproduce actual conditions of use over and above those specified in the framework (Grip, durability, dexterity, contact heat).

HOW TO READ THIS CATALOGUE?

Step 1: Identify your protection needs

PAGE 14
Chemical protection
Disposable
Reusable

PAGE 34
Mechanical protection
Cut protection
Handling protection

PAGE 54
Thermal protection

PAGE 56
Food expert range

PAGE 64
Critical environment protection

Step 2: Define the type of glove

Define the type of gloves that best meets your needs in terms of:

- **usage** (performance, comfort, environment, wearing time),
- **the environment and the risks involved.**

Step 3: Select the most appropriate reference

Select the most appropriate product to meet your needs with the help of the main technical characteristics table.

PVC		NATURAL LATEX				LATEX MIX	
frequent CONTACT		splashes					
continuous WEAR		short WEAR		intermittent WEAR			
TELSOL 369	TELSOL 351	VITAL 175	VITAL 520	VITAL 165	VITAL 115	VITAL 210	VITAL 180
Good mechanical protection against low chemical hazards	Comfort, flexibility and mechanical protection for low chemical hazards	Dexterity and flexibility for light aggressive environments	Dexterity and flexibility in light aggressive environments	Light glove, supple and flexible	Precision dexterity in non-aggressive environments. Colour-coding to increase safety	The effective response to contact with aggressive detergents	Dexterity and better resistance to oils and greases

Glazing

ENERGY
Nuclear, wind turbine,
petrochemical industries

Regulation (EU) 2016/425

Why a PPE Regulation?

Protective gloves are PPE (Personal Protective Equipment) and must comply with the European Regulation 2016/425 in order to freely circulate within the European Union.

The Regulation 2016/425 contains the requirements that PPE must satisfy to guarantee the health and safety of users.

That means that PPE must protect up to the required levels without compromising the user's health.

Harmonised European standards (EN 388, EN ISO 374-1...) are used in the certification process to assess conformity of the product to the requirements of the PPE Regulation in relation to the risks against which the product is intended to offer protection.

The manufacturer must indicate the conformity of the product by CE marking it. He must also provide a EU declaration of conformity.

PPE Regulation (EU) 2016/425

This European Regulation was implemented on 21 April 2018. It replaced the European Directive 89/686/EC, which was withdrawn on this same date.

Regulation (EU) 2016/425 and Directive 89/656/EEC

Regulation (EU) 2016/425 stipulates the essential health and safety requirements for designing and manufacturing PPE, as well as the responsibility of manufacturers or importers and conformity procedures to affix the CE marking on PPE.

Directive 89/656/EEC is dedicated to professional users of PPE. It lays down the responsibilities of employers to supply their employees with adequate CE-marked PPE and ensure their safe use.

CATEGORIES OF RISK AND CORRESPONDING CERTIFICATION PROCEDURE

CAT 1

Minimal risks only. The manufacturer is responsible for the conformity of its products.

CAT 2

Risks other than CAT 1 and CAT 3. CE-certificate of conformity obtained from a Notified Body.

CAT 3

Risks causing irreversible damage to health. CE-certificate of conformity and conformity of the production from Notified Bodies.

How to read the standards

The following pictograms can help you understand the performance characteristics of a glove:

MECHANICAL PROTECTION	CHEMICAL AND MICRO-ORGANISMS PROTECTION	OTHERS	THERMAL PROTECTION

Standards information

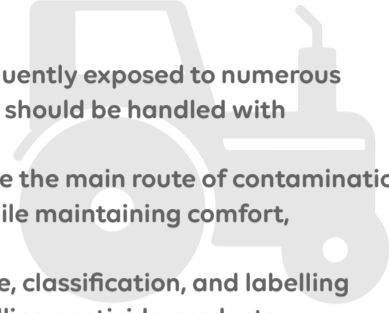

PROTECTION AGAINST PESTICIDES

ISO 18889: 2019 STANDARD

Protective gloves for pesticide operators and re-entry workers

BACKGROUND

Workers in farm and agriculture sectors are frequently exposed to numerous pesticides hazardous to health. These chemicals should be handled with precautions. Hand protection is fundamental as our hands are the main route of contamination. Gloves are necessary to protect against risks while maintaining comfort, ease of movement and dexterity. This standard establishes minimum performance, classification, and labelling requirements for gloves worn by operators handling pesticide products and re-entry workers.

GLOVE CLASSIFICATION
Protective gloves are classified into 2 categories:

WHOLE HAND PROTECTION GLOVE		PARTIAL HAND PROTECTION GLOVE (fingertips and palm-side)
Relatively low potential risk	Higher potential risk	GR gloves GR ISO 18889 Re-entry worker who is in contact with dry and partially dry pesticide residues that remain on the plant after pesticide application. Mechanical properties that are required for several re-entry tasks. Breathable material in the back of the hand provides comfort.
G1 gloves G1 ISO 18889 Handling diluted pesticides. No mechanical risk.	G2 gloves G2 ISO 18889 Handling diluted or concentrated pesticides. Minimum mechanical resistance requirement.	
Disposable gloves	Chemical gloves	High dexterity mechanical gloves

STATIC ELECTRICITY

Which standard deals with electrostatic properties?

GLOVES STANDARDS REQUIREMENT	TEST METHOD	PICTOGRAM
ATEX environment	EN 16350 Vertical resistance: <math><10^8 \Omega</math> at 25% relative humidity <i>*The tests must be performed on 5 samples which must all pass the limit of vertical resistance</i>	EN 1149-2 Introduced in EN ISO 21420: 2020 NEW
Protection of electronic devices from ElectroStatic Discharge (ESD)	No standard	No test method No pictogram

ESD: MAPA PROFESSIONAL POSITION

Working in ATEX zones or handling electronic devices, both areas have the same need for suitable gloves: they must be dissipative. As there is no standard for ESD gloves, at MAPA PROFESSIONAL we decided to refer to the EN 16350 (ATEX gloves). This standard is very strict, so a glove complying to EN 16350 will be suitable for handling electronic devices.

Standards changes

EN 407

The EN 407 standard was revised in 2020.

The main reason for the revision is the inclusion of thermal protection articles for private use (oven gloves, potholders, etc.) in the new PPE Regulation (EU) 2016/425. The performance levels remain unchanged!

BEFORE	NOW	BEFORE	NEW NOW
GLOVES RESISTANT TO FLAME			
EN 407 321XXX	EN 407 321XXX NO CHANGE	The performance levels were based on the average value of test results No mechanical resistance requirement	The performance levels are based on the lowest value of test results Introduction of a minimum mechanical resistance: minimum level 1 (10N) for tear resistance - EN 388
GLOVES NOT RESISTANT TO FLAME			
EN 407 X2XXXX	NEW EN 407 X2XXXX	Minimum length required by EN 420:2004 Issue with flame test with leather gloves	Higher minimum requirement of length for gloves that offer protection from metal projection Test is now reliable

EN ISO 21420

The EN 420 standard was revised in 2020 becoming standard EN ISO 21420.

This updated standard newly specifies the general requirements and test methods for glove design and construction, safety, comfort and performance, as well as the marking and information provided by the manufacturer applicable to all protective gloves.

The new EN ISO 21420 additionally applies to:

- ▶ mittens
- ▶ pot holders
- ▶ arm protectors

NEW INNOCUOUSNESS	NEW ELECTROSTATIC PROPERTIES FOR ATEX AREA	NEW GLOVE SIZING	NEW GLOVE MARKING	NEW INSTRUCTIONS FOR USE
Limited content of DMFa (Dimethylformamide) in polyurethane (PU) gloves. It shall not exceed 1,000 mg/kg Limited content of Polycyclic Aromatic Hydrocarbons (PAHs) in the rubber or plastic materials. It shall not exceed 1 mg/kg	New pictogram EN 16350 The electrostatic properties shall be tested according to the EN 16350 standard (test method EN 1149-2)	No more minimum length required Sizes of gloves are defined with respect to the sizes of the hands they are to fit!	For improved manufacturing batch traceability, gloves shall be marked with: Manufacturing date at least the month and year If applicable, obsolescence date behind the pictogram	Instructions relevant to donning, doffing and adjusting gloves Comfort and hygiene Protection from contamination Natural rubber content warning List of substances that can cause allergies (other than rubber) are no more mandatory* on instructions for use <i>*on request</i>

UNDERSTANDING THE SPECIFIC FEATURES OF A GLOVE FOR AN INFORMED CHOICE

Different cuff edging Depending on your use

Safety cuff

Wrist protection, quick glove removal and good ventilation of the hand. Perfect for jobs with a risk of entanglement.

Knitted cuff

Provides a good fit for the hand and protects the wrist

Straight cuff

Improved hand ventilation

Rolled cuff

Reduces the risk of tearing when doffing gloves

Scalloped cut

Longer service life for the glove

Shapes, sizes and thicknesses

Glove length

They must be chosen in accordance with the risks associated with the handling circumstances, to give more or less protection to the forearm. They generally vary between 22 and 60 cm.

Glove size

This depends on the circumference of the user's palm, and varies from size 5 to 12. This affects usage comfort.

Glove thickness

This influences the user's dexterity and the performance of the glove. Varies between 0.1 and 2.5 mm.

Anatomical or ambidextrous gloves

Anatomical gloves

A glove is called anatomical when there is one shape for the left hand and another for the right.

Ambidextrous gloves

Ambidextrous gloves can be worn equally well on either hand; this is mainly the case for thinner gloves.

Various external finishes to suit your needs

Smooth

No marking of objects being handled

Reinforced grip

Excellent grip in wet environment

Non-slip embossed

Excellent grip in oily environments

Dot embossing

Improved thermal insulation

Pebbled

Good grip and minimal glove fouling

The different types of internal finish

Powdered

Makes it easier to don and doff gloves, without having to increase the thickness of the glove.

Chlorinated/Easy donning treatment

Makes it easier to don and doff gloves without increasing the thickness and without using powder.

Reduces the allergy risk of natural latex gloves.

Flocked

Cotton-based textile fibres, covering the inside of the gloves.

Fleeced feel comparable with that of a fine carpet.

Good sweat absorption.

Textile support

Knitted interior, made from cotton or synthetic materials for increased comfort or specific performance.

MAPA has developed an exclusive technology for manufacturing a glove with textile support. This improves comfort for the user.

Use the «Ultracomfort» pictogram  to locate this technology.

The different textile types:

Cotton

Comfort, thermal insulation and sweat absorption.

Polyamide

Optimised dexterity (thin, seamless).

Para-aramid

Cut and heat resistance.

High density polyethylene

Cut-resistance and optimised dexterity.

MAPA TECHNOLOGIES (SEE NEXT PAGE)

Increased protection against acids for high end performance

Excellent grip in oily environments combined with liquid-proof protection in palm area

Comfort and allows hand to breathe without compromising durability

UNDERSTANDING OUR TECHNOLOGIES

Our **TOPCHEM** technology offers increased protection against acids for high end performance

COMFORT

- Flexibility and suppleness for ease of movement
- Optimal grip prevents hand fatigue

RESISTANCE

- The specific combination of polymers provides a better degradation performance to acids
- Good mechanical resistance

DURABILITY

- Extended use guaranteed by our process
- Higher durability allows a better productivity

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed a product with **TOPCHEM** technology to protect against acids. This technology is used in our **ULTRANITRIL 410**.

Our **GRIP&PROOF** coating technology offers the following benefits for use in oily and dirty environments

GRIP

- Excellent grip when handling oily parts with or without cut risks
- Prevents the risk of dropping objects
- Reduction in muscle fatigue and risk of RSI (Repetitive Strain Injury)
- Improves productivity

RESISTANCE

- The durable coating allows long-lasting use
- Glove stays clean and effective for longer due to its liquid resistance
- Optimised costs

SKIN PROTECTION

- Impermeable at strategic points
- Protects from irritant oils
- Reduces the wearer's risk of eczema and dermatitis

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed a range of gloves with or without cut protection, with **GRIP&PROOF** technology for oily or greasy environments. This technology is used in our **ULTRANE** and **KRYTECH** ranges.

Our **RESICOMFORT** coating technology offers the following benefits for precise handling operations in dry environments

COMFORT AND BREATHABILITY

- Excellent dexterity at fingertips
- Second skin effect
- Suppleness and flexibility
- Breathability: Greater circulation of air protects against sweat

DURABILITY

- Extended use guaranteed by our exclusive process
- Resistance to friction thanks to a highly resistant coating
- Optimised costs

SKIN PROTECTION

- DMF free
- Free from harmful substances
- **STANDARD 100 by OEKO-TEX®**

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed a range of gloves with or without cutting protection, with **RESICOMFORT** technology for dry environments. This technology is used in our **ULTRANE** and **KRYTECH** ranges.

NEW PRODUCTS

Products specially designed to meet chemical, mechanical and cut protection needs

CHEMICAL PROTECTION

ULTRANITRIL 410

CHEMICAL PROTECTION TYPE A CUT PROTECTION LEVEL C

Cut and Chemical protection with better degradation performance against acids

[See page 23](#)

SOLO BLACK 935

CHEMICAL PROTECTION TYPE C

Suppleness and optimal resistance

[See page 31](#)

MECHANICAL PROTECTION

ULTRANE 681

CUT PROTECTION LEVEL A

Second skin effect for optimal comfort and dexterity thanks to its 18 gauge

[See page 35](#)

CUT PROTECTION

KRYTECH 609 / 809

CUT PROTECTION LEVEL B

Light cut protection with high comfort, suppleness and durability for precision work even in dirty environments. With or without crotch reinforcement

[See page 43](#)

KRYTECH 692

CUT PROTECTION LEVEL B

Light cut protection with second skin effect for optimal comfort and dexterity thanks to its 18 gauge. High vision textile for reinforced safety

[See page 45](#)

KRYTECH 693

CUT PROTECTION LEVEL C

Medium cut protection with second skin effect for optimal comfort and dexterity thanks to its 18 gauge. High vision textile for reinforced safety

[See page 45](#)

KRYTECH 694

CUT PROTECTION LEVEL D

High cut protection with second skin effect for optimal comfort and dexterity thanks to its 18 gauge. High vision textile for reinforced safety

[See page 47](#)

CHEMICAL PROTECTION

Chemical hazards are not confined to the chemical industry. Many people, in a variety of sectors, are faced with chemical risks when handling products which are aggressive to a greater or lesser extent (oils, acids, solvents, etc.).

More than 100,000 chemical substances are now classified (identified by their CAS number).

In order to meet the wide variety of aggressive situations that exist, Mapa Professional offers a wide range of protective gloves designed using polymers, which behave differently and provide different protection according to the situation.

The results of chemical testing and the different chemical classification indices must not be seen as the only factors when selecting a glove.

Actual usage conditions, the contact time with a given chemical, the concentration, the temperature, the usage frequency of a glove and the care conditions can affect glove performance.

All of these factors should be taken into account when choosing the right glove.

Refer to our dynamic database, which is constantly updated, and download the chemical resistance tables for our gloves.

www.mapa-pro.com

THE MAPA GUIDE: 2 PERFORMANCE INDICATORS

To characterise the performance of the elastomers and plastics used to manufacture safety gloves, tests are carried out to determine the behaviour of these materials when confronted with the various families of chemical products.

Mapa Professional takes these different parameters into account to determine the relative performance of the different families of gloves and hence help you make the best possible choice.

1. PERMEATION TIMES

The permeation time for a given chemical product, i.e. the time taken for the chemical to penetrate the glove, at a molecular level; in some cases, there is no visible deterioration of the glove.

2. DEGRADATION INDEX

The degradation index of the glove in contact with a given chemical product, i.e. the degree of deterioration of the glove shown by an alteration of its physical properties (e.g. softening, hardening, etc.).

SELECT THE MOST APPROPRIATE CHEMICAL GLOVE FOR YOUR NEEDS USING THE THREE STAGES BELOW:

1 Identify which family of chemical products the substance you are handling belongs to ▼			2 Determine the most appropriate protective material for your specific application. ▼				3 Choose your gloves according to the level of protection you require. next pages ▶

* The most frequently used materials for manufacturing chemical protection gloves.

** Protection targeted against certain aggressive chemical product families, these are more stringent than for standard materials.

Value for money
Mechanical strength

Excellent flexibility
Good puncture and tearing resistance
Suitable for cold environments

Good puncture and abrasion resistance
No risk of protein-related allergies

Good flexibility
Good thermal resistance

Excellent chemical resistance
Flexible and elastic

High chemical resistance

Not suitable for handling hot parts

Risk of allergies caused by the proteins in the natural latex

Not recommended for cold environments

Poor mechanical properties

Poor mechanical properties

CHEMICAL PROTECTION

REUSABLE: TELSOL - VITAL RANGE

HOW CAN YOU REFINE YOUR CHOICE?

1 RISK

Combination between contact time and the aggressiveness of the chemical being handled.
Choose the performance of your gloves based on the type of risk:

- splashes**
Chemical substances diluted by immersion or splashes of aggressive substances
- frequent contact**
Pure or mixed chemical substances in frequent contact
- prolonged contact (or immersion)**
Pure or mixed chemical substances in frequent contact

2 WEAR TIME

Identifies the comfort level required by the operator the longer the wear time, the more comfortable the glove needs to be (perspiration, flexibility/fatigue).

- short wear**
Chlorinated interior finish
- intermittent wear**
Flocked interior finish
- continuous wear**
Fabric-lined interior finish
- ultra-comfort wear**
MAPA exclusive technology providing greater flexibility

MATERIAL PVC		MATERIAL NATURAL LATEX				MATERIAL LATEX MIX

CHEMICAL PROTECTION

REUSABLE: ALTO - JERSETTE RANGE

HOW CAN YOU REFINE YOUR CHOICE?

1

RISK

Combination between contact time and the aggressiveness of the chemical being handled.

Choose the performance of your gloves based on the type of risk:

splashes

Chemical substances diluted by immersion or splashes of aggressive substances

frequent contact

Pure or mixed chemical substances in frequent contact

prolonged contact (or immersion)

Pure or mixed chemical substances in frequent contact

2

WEAR TIME

Identifies the comfort level required by the operator the longer the wear time, the more comfortable the glove needs to be (perspiration, flexibility/fatigue).

short wear

Chlorinated interior finish

intermittent wear

Flocked interior finish

continuous wear

Fabric-lined interior finish

ultra-comfort wear

MAPA exclusive technology providing greater flexibility

CHEMICAL PROTECTION DISPOSABLE: SOLO RANGE

MAPA Professional offers a range of disposable gloves to meet your needs regardless of your working environment. The use of different polymers optimises the ergonomics and performance of the gloves: flexibility, resistance and comfort.

DISPOSABLE GLOVES

There are several advantages of disposable gloves:

- **Freedom of movement**
- **Protection for hands and the products being handled**
- **Rolled cuff to prevent tearing while ensuring the glove stays in place on the arm**

4 ADDITIONAL CRITERIA TO REFINE YOUR CHOICE

1 POLYMERS

PVC

Mechanical strength and price.

LATEX

Flexibility and comfort.

NITRILE (next page)

Mechanical resistance and resistance to oils.

TRIPOLYMER (next page)

Flexibility, mechanical strength and chemical resistance to splashes.

2 COMFORT AND FLEXIBILITY

The various interior finishes (powdered/chlorinated) make it possible to adapt to the type of application and the specific requirements of the wearer.

POWDERED

Better sweat absorption.

CHLORINATED

Easy donning and no powder on hands.

EASY DONNING TREATMENT

Makes it easier to don and doff gloves, without increasing the thickness and without using powder.

Reduces the allergy risk of natural latex gloves.

3 COLOUR

The use of different colours is in response to the unique demands of certain sectors and it enables visual checks by allocating a specific colour to each application.

4 DIMENSIONS

Choosing the length and thickness of the glove makes it possible to factor in the limitations related to the workstation: dexterity, resistance and forearm protection.

MECHANICAL PROTECTION HANDLING PROTECTION: ULTRANE RANGE

The Mapa Professional Handling Protection range meets requirements for hand comfort and protection when carrying out a wide variety of work.

PRECISION WORK

The Ultrane range represents all that is needed for precision work requiring a high-level of dexterity while maintaining a sense of touch when handling small or delicate parts.

- Ease of movement (comfort)
- Service life suitable for daily use
- Suitable for different environments (dry, wet, oily, greasy, dirty, etc.)
- Superior performance in slippery settings for certain products

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

dry and **relatively clean** environments

oily and **very dirty** environments

wet environments

2 SERVICE LIFE

The service life of a glove for precision work is directly linked to the thickness of the polymer layer covering the fabric and to the adhesion and nature of the fabric in a given environment.

HANDLING PROTECTION:

ULTRANE RANGE

PRECISION WORK

The Ultrane range represents all that is needed for precision work requiring a high-level of dexterity while maintaining a sense of touch when handling small or delicate parts.

- Ease of movement (comfort)
- Service life suitable for daily use
- Suitable for different environments (dry, wet, oily, greasy, dirty, etc.)
- Superior performance in slippery settings for certain products

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- ☐ **dry** and **relatively clean** environments
- 🛢️ **oily** and **very dirty** environments
- 💧 **wet** environments

2 SERVICE LIFE

The service life of a glove for precision work is directly linked to the thickness of the polymer layer covering the fabric and to the adhesion and nature of the fabric in a given environment.

- 🕒 **short** service life
- 🕒 **long** service life
- 🕒 **high-performance** service life

MECHANICAL PROTECTION

CUT PROTECTION: KRYTECH RANGE

The Mapa Professional range of cut-protection gloves provides excellent hand comfort and protection specially designed for various types of work involving cut hazards.

PRECISION WORK

Select your cut-protection gloves according to your specific needs. For precision work, you need gloves that act like a second skin, protecting against cuts but maintaining excellent dexterity.

IMPORTANT

Using cut-protection gloves does not guarantee total protection (for instance, when using a cutting machine). Furthermore, the EN 388 and ISO 13997 test results give no more than an indicative average value, and an on-site study may be recommended to determine the most appropriate type of protection for a workstation. Do not hesitate to contact our technical department for further information.

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- dry** and **relatively clean** environments
- oily** and **very dirty** environments
- wet** environments

2 RISK

The higher the level of performance, the greater the glove's resistance to the combined effects of the sharpness of the object's cutting edge and the pressure applied.

- low** risk - ISO B
- moderate** risk - ISO C
- high** risk - ISO D
- very high** risk - ISO E

3 SERVICE LIFE

MECHANICAL PROTECTION

CUT PROTECTION: KRYTECH RANGE

HEAVY-DUTY WORK

Select your cut-protection gloves according to your specific needs. For heavy-duty work, your gloves must protect against cuts and impacts but also need to be tough and long lasting.

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- dry** and **relatively clean** environments
- oily** and **very dirty** environments
- wet** environments

2 RISK

The higher the level of performance, the greater the glove's resistance to the combined effects of the sharpness of the object's cutting edge and the pressure applied.

- low** risk - ISO B
- moderate** risk - ISO C
- high** risk - ISO D
- very high** risk - ISO E

3 SERVICE LIFE

The service life of a glove for heavy-duty work is directly linked to the thickness of the polymer layer covering the fabric and the nature of the fabric, in a given environment.

- short** service life
- long** service life
- high-performance** service life

dry and relatively clean ENVIRONMENTS		wet ENVIRONMENTS		oily and very dirty ENVIRONMENTS

THERMAL PROTECTION

The Mapa Professional thermal protective glove range provides excellent comfort and protection to hands whenever work situations require thermal protection in a hot or cold environment.

HOW CAN YOU REFINE YOUR CHOICE?

1 TEMPERATURE

Depending on the temperature of the objects to be handled.

- Temperature - 10°C
- Temperature up to 150°C
- Temperature above 150°C

2 ENVIRONMENT

Depending on the environment in which you are working.

- wet environments
- dry environments
- moderately oily environments
- chemical environments

3 USAGE DURATION

In cold settings, the duration depends on the intrinsic quality of the coating material. In hot settings, the duration depends on the contact time with the part at a given temperature.

SERVICE LIFE (COLD)

- long service life
- high-performance service life

CONTACT TIME (HOT)

- short contact
- prolonged contact

FOOD EXPERT RANGE

Compliance with hygiene rules is an essential requirement in the food industry. The industry invests to continuously improve the safety of its customers, as producers alone are legally liable for the sanitary quality of their products.

European Regulations define in great detail the food contact tests to be performed for each type of food. Therefore, a glove may be approved for the handling of certain foodstuffs but not others.

Indeed, simply affixing the pictogram to a glove without giving more detailed information does not provide an adequate guarantee of compatibility with a given food.

Through its dedicated food industry selection guide, Mapa Professional aims to help end users check the food compliance of each glove according to the foods they actually handle, strictly in line with European Regulations.

By providing the test results for all of the gloves in its Food Expert range, Mapa Professional aims to meet the strictest requirements of its customers' Quality systems.

These tests are available on our Mapa Professional website

mapa-pro.com

SELECT THE RIGHT GLOVE FOR YOU DEPENDING ON THE FOOD HANDLED

- STEP 1 Find the food you handle using the food groups.
- STEP 2 Identify the gloves suitable for handling this type of food.

THEN CHECK YOUR GLOVE FOR USE AND COMFORT

- STEP 3 Turn to the next page to choose the level of protection required (disposable, thermal protection, cut protection, liquid-proof) and the performance required based on your use.

FOOD CONTACT: YOUR SELECTION GUIDE

- Suitable for contact with this type of food
- If pH > 4.5, suitable for contact with this type of food
If pH < 4.5, unsuitable
- Unsuitable for contact with this type of food

SELECT THE RIGHT GLOVE

FOOD EXPERT RANGE

HOW CAN YOU REFINE YOUR CHOICE?

1 WEAR TIME

Identifies the comfort level required by the operator. The longer the wear time, the more comfortable the glove needs to be (perspiration, flexibility/fatigue).

-  **short** wear
(Chlorinated interior finish)
-  **intermittent** wear
(Flocked interior finish)
-  **continuous** wear
(Fabric-lined interior finish)
-  **ultra-comfort** wear
(MAPA exclusive technology providing greater flexibility)

2 MATERIAL

Materials guide for disposable and liquid-proof gloves.

Natural latex
Flexibility, comfort and value for money.

Nitrile
Strength, durability, handling of oily foods with no risk of allergies.

CRITICAL ENVIRONMENT PROTECTION

To ensure the protection of both operators and the products they handle, the Mapa Professional ranges of gloves were designed to perfectly fulfill the requirements of high-tech production.

Created with innovative, highly technical processes and subject to inspection at every stage of their design and packaging, these gloves satisfy all the quality criteria necessary for work in controlled environments.

QUALITY GUARANTEES AT EVERY STAGE OF PRODUCTION

- Mapa Professional uses its own post-manufacturing cleaning process and clean rooms to maintain a level of product and packaging quality that meets requirements for cleanliness and sterility.
- All manufacturing sites have ISO 9002 certification.
- The levels of glove cleanliness are tested periodically to ensure that the production quality of these gloves intended for use in critical environments complies with established specifications.
- Each chemical protection glove is tested using appropriate methods to detect any sealing defects so as to maintain operator safety.
- The chemical resistance checks comply with ASTM standards and EN 374-3, providing users with the information they need to choose a suitable glove for a given application.

YOUR PRIORITIES ARE OUR PRIORITIES

- improving user effectiveness, productivity and safety by designing gloves that are ever-more effective and safe to use,
- increasing production yields by reducing the amount of contaminants in products.
